# New Frontiers in Microsimulation Modelling

European Centre Vienna

---

Ashgate

---

**Asghar Zaidi** is Director Research at the European Centre for Social Welfare Policy and Research in Vienna. Until recently, he has been a Senior Economist at the Social Policy Division, OECD, Paris, where he worked on issues related to pension policy in OECD countries. In the past, he worked as Economic Advisor at the Department for Work and Pensions of the United Kingdom, and as a researcher at the Social Policy Department of the London School of Economics and University of Oxford. His work interests include economics of ageing (particularly pension reforms and their impact on retirement incomes), implications of living costs of disability on poverty and resource measurement, and dynamic microsimulation modelling (in particular those used for pension trends and their underlying factors). He has been the Vice-President of the International Microsimulation Association since 2007. He is currently a research affiliate at the German Economic Research Institute (DIW Berlin), the Centre for the Analysis of Social Exclusion, London School of Economics, and the Centre for Research on Ageing, Southampton University.

**Ann Harding** has recently been re-elected President of the International Microsimulation Association and has published four books on microsimulation with Elsevier (1993, 1996, 2\*2007). After working on major policy reviews in several Federal Government departments, Ann was appointed Professor of Applied Economics and Social Policy and Director of the National Centre for Social and Economic Modelling (NATSEM) at the University of Canberra in January 1993. She is an internationally recognized expert in the fields of microsimulation modelling, income distribution, and tax/transfer policy. Ann has played a key role for the past 14 years in constructing sophisticated data and models that can be used to assist policy-makers in assessing the revenue and distributional consequences of possible policy options. In 1996 Ann was elected a Fellow of the Academy of Social Sciences and in 2003 was elected President of the International Microsimulation Association. Ann holds a PhD from the London School of Economics and a Bachelor of Economics with First Class Honours from Sydney University.

**Paul Williamson** is a Senior Lecturer in the Department of Geography at the University of Liverpool in the UK. He was awarded his PhD from the University of Leeds for his work on a microsimulation model of health care for the elderly. Dr Williamson is the editor of the International Journal of Microsimulation and is particularly interested in spatial microsimulation models and in small area analyses.

---

During the past 15 years microsimulation models have become firmly established as vital tools for analysis of the distributional impact of changes in government programmes. Across Europe, the US, Canada and Australia, microsimulation models are used extensively to assess who are the winners and losers from proposed policy reforms. Encouraged by the ever-increasing complexity of social and economic programmes, microsimulation models have become an essential part of the policy reform process, allowing identification of the magnitude of gains and losses from policy changes in such areas as taxation, social security, pensions and social services.

While the analysis of the distributional impact of tax and cash transfer changes in developed countries has for some decades been the “bread and butter” of microsimulation modelling, microsimulation is now expanding into new frontiers. These include geographic expansion (into African countries and the countries of the former Soviet Union); subject area expansion (embracing such new topics as small area analysis, health care and child care); and breakthroughs in the technology associated with microsimulation (such as in behavioural and labour supply modelling).

This volume contains selected papers from the 1st General Conference of the International Microsimulation Association, hosted by the European Centre Vienna in August 2007. As well as providing a useful introduction to the state of microsimulation internationally today, it contains a wide range of chapters illustrating the new applications and approaches being used across the world.

This book will be of relevance to government policy-makers, social policy planners, economists and those concerned with predicting the impact of public policy change. For those who live in countries that have already developed a sophisticated microsimulation modelling infrastructure, the volume will provide a highly relevant guide to the path-breaking directions being taken at the frontiers of this discipline. For researchers and policy-makers living in countries that have not yet developed microsimulation models, the volume will provide insights into the questions that can be addressed using these types of models.

*Asghar Zaidi* is Director Research at the European Centre for Social Welfare Policy and Research in Vienna. *Ann Harding* is Professor of Applied Economics and Social Policy and Director of the National Centre for Social and Economic Modelling (NATSEM) at the University of Canberra, Australia. *Paul Williamson* is a Senior Lecturer in the Department of Geography at the University of Liverpool in the UK.

# Contents

<b>List of Figures and Tables .....</b>	<b>9</b>
---	----------

<b>Preface – Orcutt’s Vision 50 Years On .....</b>	<b>21</b>
--	-----------

*Michael Wolfson*

## **Chapter 1**

<b>New Frontiers in Microsimulation Modelling: Introduction .....</b>	<b>31</b>
---	-----------

*Paul Williamson, Asghar Zaidi and Ann Harding*

<b>Part I: Spatial Modelling .....</b>	<b>51</b>
--	-----------

**5**

## **Chapter 2**

**Moses: Dynamic Spatial Microsimulation**

<b>with Demographic Interactions .....</b>	<b>53</b>
--	-----------

*Mark Birkin, Belinda Wu and Phil Rees*

## **Chapter 3**

**Small Area Poverty Estimates for**

<b>Australia’s Eastern Seaboard in 2006 .....</b>	<b>79</b>
---	-----------

*Robert Tanton, Justine McNamara, Ann Harding and Thomas Morrison*

## **Chapter 4**

**Microsimulation as a Tool in Spatial Decision Making:**

<b>Simulation of Retail Developments in a Dutch Town .....</b>	<b>97</b>
--	-----------

*Eveline S. van Leeuwen, Graham P. Clarke and Piet Rietveld*

## **Chapter 5**

**Time and Money in Space: Estimating Household Expenditure**

<b>and Time Use at the Small Area Level in Great Britain .....</b>	<b>123</b>
--	------------

*Ben Anderson, Paola de Agostini, Selma Laidoudi,*

*Antonia Weston and Ping Zong*

## **Part II: Work Incentives and Labour Supply .....153**

### **Chapter 6**

- Work Incentives, Redistribution Policies and the  
Equity-Efficiency Trade Off: Evidence from Spain .....155  
*José M. Labeaga, Xisco Oliver and Amedeo Spadaro*

### **Chapter 7**

- Microsimulating Supply /Demand Interactions  
on a Labour Market: a Prototype .....185  
*Muriel Barlet, Didier Blanchet and Thomas Le Barbanchon*

### **Chapter 8**

- Policy Swapping across Countries Using EUROMOD:  
The Case of In-Work Benefits in Southern Europe .....209  
*Francesco Figari*

### **Chapter 9**

- Behavioural Microsimulation: Labour Supply and  
Child Care Use Responses in Australia and Norway .....231  
*Guyonne Kalb and Thor O. Thoresen*

## **Part III: Demographic Issues, Social Security and Retirement Incomes .....263**

### **Chapter 10**

- Fertility Decisions – Simulation in an Agent-Based Model (IFSIM) .....265  
*Elisa Baroni, Matias Eklöf, Daniel Hallberg, Thomas Lindh and Jovan Žamac*

### **Chapter 11**

- Projecting Pensions and Age at Retirement in France:  
Some Lessons From the Destinie I Model .....287  
*Didier Blanchet and Sylvie Le Minez*

### **Chapter 12**

- Rates of Return in the Canada Pension Plan:  
Sub-populations of Special Policy Interest  
and Preliminary After-tax Results .....307  
*Richard J. Morrison*

### Chapter 13

Simulating Employment Careers in the LifePaths Model: Validation across Multiple Time Scales .....	333
<i>Geoff T. Rowe and Kevin D. Moore</i>	

### Chapter 14

Employment Transitions and Earnings Dynamics in the SAGE Model .....	351
<i>Asghar Zaidi, Maria Evandrou, Jane Falkingham, Paul Johnson and Anne Scott</i>	

### Chapter 15

Simulating Earnings in Dynamic Microsimulation Models .....	381
<i>Cathal O'Donoghue, Ross H. Leach and Stephen Hynes</i>	

### Chapter 16

Continuous-time Microsimulation in Longitudinal Analysis .....	413
<i>Frans Willekens</i>	

7

### Chapter 17

Welfare Effects of Alternative Financing of Social Security – Calculations for Belgium .....	437
<i>Bart Capéau, André Decoster, Kris De Swert and Kristian Orsini</i>	

### Chapter 18

Shooting at Moving Targets: Short- versus Long-Term Effects of Anti-Poverty Policies .....	471
<i>Rembert R.G. De Blander and Ides Nicaise</i>	

<b>Part IV: Macro-Micro Linkages and Environmental Policies .....</b>	<b>499</b>
---	------------

### Chapter 19

A Dynamic Analysis of Permanently Extending the 2001 and 2003 Tax Cuts: An Application of Linked Macroeconomic and Microsimulation Models .....	501
<i>Tracy L. Foertsch and Ralph A. Rector</i>	

**Chapter 20**

Linking Microsimulation and Macro-Economic Models  
to Estimate the Economic Impact of Chronic Disease Prevention .....527

*Laurie J. Brown, Anthony Harris, Mark Picton, Linc Thurecht,  
Mandy Yap, Ann Harding, Peter B. Dixon and Jeff Richardson*

**Chapter 21**

Microsimulation Meets General Equilibrium –  
A New Tool for Applied Policy Analysis .....557

*Markus Clauss and Stefanie Schubert*

**Chapter 22**

Higher Immigration – Empirical Analyses of  
Demographic and Economic Effects for Norway .....581

*Nils Martin Stølen, Inger Texmon and Vibeke O. Nielsen*

**8**

**Chapter 23**

Complying with the Kyoto Targets: An Assessment  
of the Effectiveness of Energy Taxes in Italy .....605

*Rossella Bardazzi, Filippo Oropallo and Maria Grazia Paziienza*

**List of Contributors .....631**

# List of Figures and Tables

## Figures

### Chapter 2

Figure 1:	The structure of the Moses dynamic model .....	55
Figure 2:	Housing preference by household size .....	65
Figure 3:	The Leeds Metropolitan Area .....	65
Figure 4:	Demographic profiles for Leeds: Schoolchildren .....	70
Figure 5:	Demographic profiles for Leeds: Elderly .....	70
Figure 6:	Population dynamics by ethnicity (metropolitan scale) .....	71
Figure 7:	Increase in the elderly (85+) population, 2005-2030 (neighbourhood scale) .....	72
Figure 8:	Increase in the proportion of the population with poor health, 2005-2030 (neighbourhood scale) .....	73

### Chapter 3

Figure 1:	Population-weighted quintiles of poverty by SLA, 2006 .....	89
Figure 2:	Population-weighted deciles of poverty by SLA, 2006 .....	90

### Chapter 4

Figure 1:	The creation of a micro-population by simulation .....	98
Figure 2:	Schematic map of Nunspeet and its hinterland .....	112
Figure 3:	Share in total population of (a) older households (per zip-code) with low income and that portion of them without a car; (b) same for younger households .....	113
Figure 4:	Share in total recently moved (<5 years) households of (a) older households; (b) same for younger households .....	115

### Chapter 5

Figure 1:	Forecasting approach – 2006 as an example .....	127
Figure 2:	Estimated and observed shares of expenditures (1994-2003) .....	130

Figure 3:	Observed (1994-2003) and forecast (2004-2016) mean weekly household expenditure .....	132
Figure 4:	Observed (Census 2001) vs. estimated (model) work hours .....	140
Figure 5:	Estimated mean work time in 2001 (Eastern region, minutes per day, weekdays) .....	141
Figure 6:	Estimated mean mass media time in 2001 (Eastern region, minutes per day, weekdays) .....	142
Figure 7:	Estimated total household weekly telephone expenditure (Census 2001, EFS 2001-2) vs. total weekly BT residential household expenditure in Q1 2003 (Eastern region subsample, Census wards).....	143
Figure 8:	Estimated change in mean weekly household spend on fixed line telephony 2001-2016 (Eastern region).....	145
Figure 9:	Estimated change in mean weekly household spend on mobile telephony 2001-2016 (Eastern region).....	146
Figure 10:	Estimated change in mean weekly household spend on internet subscriptions 2001-2016 (Eastern region) .....	147
Figure 11:	Estimated change in mean household weekly expenditure on fixed line telephony with 100% internet access in 2006	148
Figure 12:	Estimated change in total household weekly expenditure per ward on fixed line telephony, assuming 100% internet access in 2006.....	149

### *Chapter 6*

Figure 1:	Winners and losers from reform options compared with 1999 system (whole sample) .....	163
Figure 2:	Social welfare variations with respect to the reference scenario (1999). Whole sample .....	166
Figure 3:	Social welfare variation of VMFT scenarios using equivalent incomes (with respect to the reference scenario, 1999). Whole sample.....	170
Figure 4:	Social welfare variation of BIFT scenarios using equivalent incomes (with respect to the reference scenario, 1999). Whole sample.....	171

### *Chapter 7*

Figure 1:	Evolution of the unemployment rate (left axis) and of the mean wage (right axis) for non-qualified workers in the Minimum wage increase scenario ("classical" environment) .....	203
-----------	---	-----

Figure 2:	Evolution of the share of workers whose wage is just above the minimum wage in the Minimum wage increase scenario ("classical" environment) .....	203
Figure 3:	Evolution of the mean wage for NQ workers in the "Unif" scenario (re-harmonization of social security contribution rates) .....	205
Figure 4:	Evolution of the overall unemployment rate in the "Unif" scenario (re-harmonization of social security contribution rates) .....	205

### Chapter 8

Figure 1:	Budget constraint charts – baseline scenario. One-earner couple with two children (9 and 7 years old).....	217
Figure 2:	Distribution of average EMTRs – only IWB recipients .....	224

### Chapter 9

Figure 1:	Labour market connections for married / cohabiting men and women, aged 20 to 45, by age of the youngest child ..	241
Figure 2:	The distribution of observed and simulated choices, 11 states, families with children 1-5 years old .....	248
Figure 3:	Probabilities in baseline system compared to probabilities when maximum fees at child care centres are set at NOK2,330 .....	254
Figure 4:	Effects on income distribution and on distribution of weekly working hours from fee reductions, Norway .....	255
Figure 5:	Effects on income distribution and on weekly working hours from child care fee reductions, Australia .....	257

11

### Chapter 10

Figure 1:	Age at birth of first child .....	268
Figure 2:	Share of 20-34 years old in higher education .....	269
Figure 3:	The probability to give birth (or adopt) by student status, and the fraction of students, by age, 2003.....	270
Figure 4:	Graphical representation of the network groups.....	272
Figure 5:	Simulated and actual (SCB in graph) fertility rates by age .....	276

### Chapter 11

Figure 1:	The ambiguous impact of pension reform on age at retirement.....	296
Figure 2:	Projected labour force participation rates for the 60-64 age group, various scenarios .....	302

## **Chapter 12**

Figure 1:	Real before-tax CPP internal rates of return: ACTUCAN actuarial model and DYNACAN by 5-year cohort .....	314
Figure 2:	Real before-tax CPP internal rates of return: Actuarial, DYNACAN and DYNACAN by birth-year cohort and gender.....	316
Figure 3:	Real before-tax CPP internal rates of return: Low earners and all participants by 5-year cohort and gender.....	319
Figure 4:	Real before-tax CPP internal rates of return: Ever-married and all participants by 5-year cohort and gender .....	321
Figure 5:	Real before-tax CPP internal rates of return: Immigrants and all participants by 5-year cohort and gender.....	322
Figure 6:	Real before-tax CPP internal rates of return: Early retirees and all participants by 5-year cohort and gender.....	324
Figure 7:	Real before-tax CPP internal rates of return: Ever-disabled beneficiaries and all participants by 5-year cohort and gender.....	326
Figure 8:	Real before/after-tax CPP internal rates of return: DYNACAN by birth-year cohort and gender.....	329

12

## **Chapter 13**

Figure 1:	Employment transitions in LifePaths .....	335
Figure 2:	Sub-models of the LifePaths employment module .....	336
Figure 3:	Proportions of women who never worked for pay, by year of birth and by education (Primary Only, University [BA+], & Other), Labour Force Survey (LFS) data and LifePaths simulations.....	337
Figure 4:	Average annual employment/population ratios for women by age in 1976 and 2004. LFS data and LifePaths simulations .....	340
Figure 5:	Cumulative population percentage for selected weeks worked in year 2000. Males by age in 2001 with 0, 8, 16, 32, 40 & 48 weeks worked. 2001 Census data and LifePaths simulations.....	341
Figure 6:	The LFS data cannot identify the stage of a career (e.g. cumulative employment spells).....	342
Figure 7:	Deciles of total wages accumulated over the years 1983 to 2004 (constant 2004 \$). T4 (tax) data and LifePaths simulations for men and women aged 30 in 1983 .....	346

## Chapter 14

Figure 1:	Dynamics in the employment status .....	354
Figure 2:	Dynamics in the type and the location of employment.....	355

## Chapter 15

Figure 1:	Earnings distribution .....	389
Figure 2:	Models to be tested .....	392
Figure 3:	Education and age-specific variation – Model 1 .....	393
Figure 4:	Inter-temporal and cross-section distribution – Model 1 ...	394
Figure 5:	Inter-temporal and cross-section distribution – Model 2 ...	397
Figure 6:	Inter-temporal and cross-section distribution – Model 3 ...	398
Figure 7:	Heteroscedasticity – variation of earnings by explanatory variable.....	399
Figure 8:	Inter-temporal and cross-section distribution – Model 4 ...	402
Figure 9:	Inter-temporal and cross-section distribution – Model 5 ...	404
Figure 10:	Inter-temporal and cross-section distribution – Model 6 ...	405
Figure 11:	Inter-temporal and cross-section distribution – Model 7 ...	406
Figure 12:	Inter-temporal and cross-section distribution – Model 8 ...	408

13

## Chapter 16

Figure 1:	The exponential model ( $\mu = 0.2$ ).....	422
-----------	--	-----

## Chapter 18

Figure 1:	Full coverage of the guaranteed minimum income: predicted effects on the time path of (non-)poverty.....	485
Figure 2:	Activation scenario: anti-poverty effects .....	488
Figure 3:	Education scenario, target group <25 y: anti-poverty effects.....	490
Figure 4:	Education scenario, target group poor <50y: anti-poverty effects.....	491

## Chapter 19

Figure 1:	Differences between individual income tax receipts after calibration of the Microsimulation and Global Insight models, calendar years 2009-16.....	512
Figure 2:	Dynamic revenue feedbacks from the extension plan, billions of dollars, fiscal years 2007-16 .....	522

## Chapter 20

Figure 1:	Change in real GDP and employment, 2006-2026 .....	549
Figure 2:	Change in real GDP, consumption and investment, 2006-2026.....	549

Figure 3:	Change in exports, imports and terms of trade, 2006-2026.....	550
-----------	--	-----

## **Chapter 21**

Figure 1:	The Combined Microsimulation-CGE-Model.....	576
-----------	---	-----

## **Chapter 22**

Figure 1:	Alternative assumptions of age structure among immigrants compared with the entire population in 2008. Percent .....	587
Figure 2:	Projections of total population under different assump- tions about net immigration (in million inhabitants).....	588
Figure 3:	Number of persons age 20-66 relative to number of persons 67+ .....	590
Figure 4:	Projections of the labour force under different assump- tions about net immigration (1000 persons).....	596
Figure 5:	Projections of the contribution rate for pensions in the National Insurance Scheme under different assumptions about size of immigration and participation rates among immigrants (in percent).....	597
Figure 6:	Demand for labour in public services directed towards children and education under different assumptions about net immigration (1000 person-years) .....	600
Figure 7:	Demand for labour directed towards public health and long-term care under different assumptions about net immigration (1000 person-years).....	600

14

## **Chapter 23**

Figure 1:	Changes in CO <sub>2</sub> emissions, 2000-2004 .....	618
-----------	---	-----

## **Tables**

### **Chapter 2**

Table 1:	Data inputs and dependencies for demographic transitions.....	57
Table 2:	Data inputs and dependencies in the migration functions ..	60
Table 3:	Analysis of movers in the British Household Panel Survey	64
Table 4:	Ward level diagnostics for the Doubly Constrained Spatial Interaction Model.....	66

**Chapter 3**

Table 1:	Benchmarks used in the reweighting algorithm.....	84
Table 2:	Non-convergent SLAs.....	85
Table 3:	Decile poverty rates as a proportion of the mean poverty rate across all SLAs modelled, 2006.....	91

**Chapter 4**

Table 1:	Constraint variables included in the six different models .	104
Table 2:	Standardized Absolute Error (SAE) of the constraint variables income, jobs and household for simulation models with different constraints and different datasets...	105
Table 3:	SAE values for the constraint variables .....	107
Table 4:	SAE values for the control variables “number of persons” and “number of single- and double-income households” .	107
Table 5:	Multinomial Logit Model specifications and parameter values for three product groups and two models .....	110
Table 6:	Spatial shopping behaviour of households (share of purchases in four zones) according to the questionnaires, the Nunspeet logit model and the general logit model.....	110
Table 7:	Share of total purchases bought in the four zones per settlement (%). .....	111
Table 8:	Share of households living 5 years or shorter in the Nunspeet region .....	114
Table 9:	The effects of a new supermarket on the total grocery expenditures in the four zones (in monthly expenditures per zone) .....	116
Table 10:	Changing flow of total expenditures (grocery, fun- and goal-shopping) for scenario 1 for different possible locations....	118
Table 11:	Changing flow of total expenditures (grocery, fun- and goal-shopping) for scenario 2 .....	118

**Chapter 5**

Table 1:	Demand system model estimation results ( <i>t</i> values in parenthesis).....	128
Table 2:	System goodness-of-fit measures.....	129
Table 3:	Preliminary constraint variables in decreasing order of statistical power for the selected top-level time-use categories .....	134
Table 4:	UK household and demographic trends (excl. Northern Ireland), 1981-2016.....	137
Table 5:	Example time-use simulation output file (partial) .....	138

**Chapter 6**

Table 1:	Equivalent variations for each reform option (in euros) ....	168
Table A1:	Comparison of updated 1995 ECHP with 1998 and 1999 ECHP (in Euro) .....	175
Table A2:	Calibration of GLADHISPANIA (in billions of Euro) .....	175
Table A3:	Descriptive statistics of the variables used in the econometric section.....	176
Table A4:	Social Security contribution and Monthly Minimum and Maximum Base (in Euro) .....	177
Table A5:	Tax rates schedule (in Euro) .....	177
Table A6:	Advantages and disadvantages of the reforms based on a flat tax .....	178
Table A7:	BIFT and VMFT: simulated scenarios (in Euro).....	178
Table A8:	Singles transition matrixes (the reference system is the one of 1999) .....	179
Table A9:	Couples transition matrixes (the reference system is the one of 1999) .....	181

16

**Chapter 7**

Table 1:	Calibration results .....	199
Table 2:	Calibration results for wage distribution.....	199
Table 3:	Effects of the demographic shock .....	201
Table 4:	Effects of economic policy shocks .....	202

**Chapter 8**

Table 1:	Social indicators, 2003 .....	216
Table 2:	Female education attainment and labour market participation, 2003 .....	218
Table 3:	Redistributive effects: impact on poverty .....	221
Table 4:	Percentage variation in equivalent disposable income by quintile.....	222
Table 5:	Average Replacement rates.....	225

**Chapter 9**

Table 1:	Estimates of income inequality and the distribution of family transfers across incomes in 2007.....	243
Table 2:	Classification of jobs and child care arrangements .....	246

**Chapter 10**

Table 1:	The parental leave minimum benefit and the student allowance benefit .....	280
----------	---	-----

Table 2:	Summary for different variables under the base scenario and the alternative scenario, average of five simulations ..	284
----------	--	-----

### **Chapter 11**

Table 1:	Partial list of policy questions and corresponding developments of the model .....	294
Table 2:	Impact of the 1993 reform on average age at retirement ....	299
Table 3:	Impact of the 2003 reform on average age at retirement, by education level .....	299
Table 4:	Impact of the 2003 reform on age at retirement depending on labour market situation before retirement (1965-1974 cohort, private sector only) .....	301

### **Chapter 12**

Table 1:	ACTUCAN and DYNACAN real CPP rates of return: selected birth-year cohorts .....	313
----------	---	-----

### **Chapter 13**

Table 1:	Summary of variables included in seven career work hazard equations .....	340
----------	---	-----

### **Chapter 14**

Table 1a:	Variables included in the population database for the labour market event .....	362
Table 1b:	Derived variables used in the labour market event .....	363
Table 2:	Coding of employment history variable .....	364
Table 3:	Employment states compared .....	368
Table 4:	Earnings distribution by estimation group .....	369
Table 5:	Earnings distribution in the estimation data for 1993 .....	370
Table 6:	Earnings distribution by sex and age, for 1993 .....	370
Table A.1:	Relative risk ratio (derived from the multinomial logit models) of quarterly employment transitions of working age males, originating from full-time work status .....	373
Table A.2:	Relative risk ratio (derived from the multinomial logit models) of quarterly employment transitions of working age females, originating from full-time work status .....	374
Table B.1:	Wage equation for male employees, further subdivided between those with advanced and non-advanced qualification .....	375
Table D.1:	Parameter table for time-variant component of the wage equation .....	379

**Chapter 15**

Table 1:	Input variables used in the simulation of employee earnings.....	383
Table 2:	Regression Estimates Ireland.....	411
Table 3:	Regression Estimates UK .....	412

**Chapter 16**

Table 1:	Number of occurrences and times to transition. Random samples of 1,000 transitions and expected values .....	424
Table 2:	State occupancies, expected values.....	427
Table 3:	State occupancies, sample values.....	428
Table 4:	Transitions, sample.....	429
Table 5:	Lifepaths during 10-year period, sample of 1,000 subjects	430
Table 6:	Number of new enrolments by year.....	432

**Chapter 17**

Table 1:	Commodity breakdown, shares in disposable income, and indirect tax rates for the NIS budget survey 2001.....	441
Table 2:	Effects on revenues in million Euros of 2001 of the reform with fixed labour supply .....	452
Table 3:	Changes in disposable income, real income and consumption based welfare gain (fixed labour supply) .....	453
Table 4:	Disposable income, labour supply and age for different orderings of gainers and losers (fixed labour supply) .....	455
Table 5:	Disposable income, activity and age for different orderings of gain and loss (fixed labour supply).....	458
Table 6:	Activity status of winners and losers (Frequency table) ....	459
Table 7:	Characteristics of active losers and winners .....	460
Table 8:	Change in labour supply by decile of disposable income..	462
Table 9:	Welfare effects of the reform for different orderings of gains and losses (flexible labour supply) .....	463
Table 10:	Winners and losers and labour supply incentives.....	463
Table 11:	Commodity breakdown, income and price elasticities, and share parameters of the ces utility function.....	468

**Chapter 18**

Table 1:	Determinants of educational attainment .....	476
Table 2:	Likelihood ratio tests for each group of socio-economic background dummies in Table 1 .....	477
Table 3:	Determinants of employment.....	478
Table 4:	Probability of becoming poor (transitions from NP) .....	480
Table 5:	Probability of staying poor (transitions from IP).....	481

Table 6:	Probability of staying poor (transitions from MI) .....	483
Table 7:	Steady state characteristics of the full coverage scenario ...	486
Table 8:	Steady state characteristics of the activation scenario .....	487
Table 9:	Steady state characteristics of the education scenario, target group <25y .....	489
Table 10:	Steady state characteristics of the education scenario, target group poor <50y .....	491
Table 11:	Net steady-state impact of policies as a fraction of the total number of poor in the initial period .....	493
Table 12:	Descriptive statistics for the variables used in the schooling estimation.....	496
Table 13:	Descriptive statistics for the variables used in the employment and poverty estimations.....	497

### **Chapter 19**

Table 1:	Projected 2011 ordinary income tax schedules for the pre-EGTRRA baseline and the extension plan .....	504
Table 2:	Change in federal individual income tax revenues from current law under the extension plan, billions of dollars...	514
Table 3:	Effects of the extension plan on average marginal individual income tax rates.....	515
Table 4:	Macroeconomic effects of the extension plan relative to the CBO's January 2006 baseline projections, fiscal years 2011-16 .....	517

### **Chapter 20**

Table 1:	Policy shocks in the MONASH CGE model.....	539
Table 2:	Growth in number of adult Australians with type 2 diabetes .....	541
Table 3:	Direct health care costs and cost savings (\$A million, 2005 constant dollars) .....	542
Table 4:	Probability of employment by diabetes status.....	543
Table 5:	Employment odds ratio for diabetes .....	544
Table 6:	Marginal effect of diabetes on employment .....	545
Table 7:	Employment average marginal effect of diabetes by age group and gender .....	546
Table 8:	Estimated gains in employed persons, 2005-2026 .....	548

### **Chapter 21**

Table 1:	Components of the household net income .....	564
Table 2:	Transfer microsimulation – CGE model: parameters.....	575

**Chapter 22**

Table 1:	Age structure by gender for the entire population, gross immigrants and net immigrants to Norway. Observations from the period 1998 to 2007 (in percent).....	586
Table 2:	The number of inhabitants in different age groups in 2050 under different assumptions about net immigration; 1000 persons and relative numbers .....	589
Table 3:	Employment rates among immigrants by region of origin and gender; 4th quarter 2007, percent of persons 15-74 years of age .....	592
Table 4:	Employed immigrants by region of origin and age; 4th quarter 2007 (in percent) .....	593
Table 5:	Employed immigrants by region of origin and period of residence; 4th quarter 2007, percent of persons 15-74 years of age .....	594
Table 6:	The number of old age pensioners and disability pensioners in 2050 under different assumptions about the size of net immigration (1000 persons) .....	597

20

**Chapter 23**

Table 1:	Italian Carbon Tax: main tax rates as provided by law .....	610
Table 2:	Carbon tax effects on sectoral profitability: ex ante micro-simulation analysis on 2000 dataset comparing 2000 and proposed 2005 tax rates .....	611
Table 3:	Firms' distribution by sector and size (2004) .....	614
Table 4:	Sectoral shares of energy consumption by product and energy intensity (2004).....	616
Table 5:	Energy prices by products for manufacturing firms, year 2004 (average=100) .....	616
Table 6:	Results for CO <sub>2</sub> emission variations (linear regression with robust variance estimates).....	619
Table 7:	Estimates of own-price and energy tax elasticities.....	622
Table A.1:	Fixed effects model – demand of diesel .....	626
Table A.2:	Fixed effects model – demand of natural gas.....	627
Table A.3:	Fixed effects model – demand of fuel oil .....	628
Table A.4:	Fixed effects model – demand of electricity .....	629
